
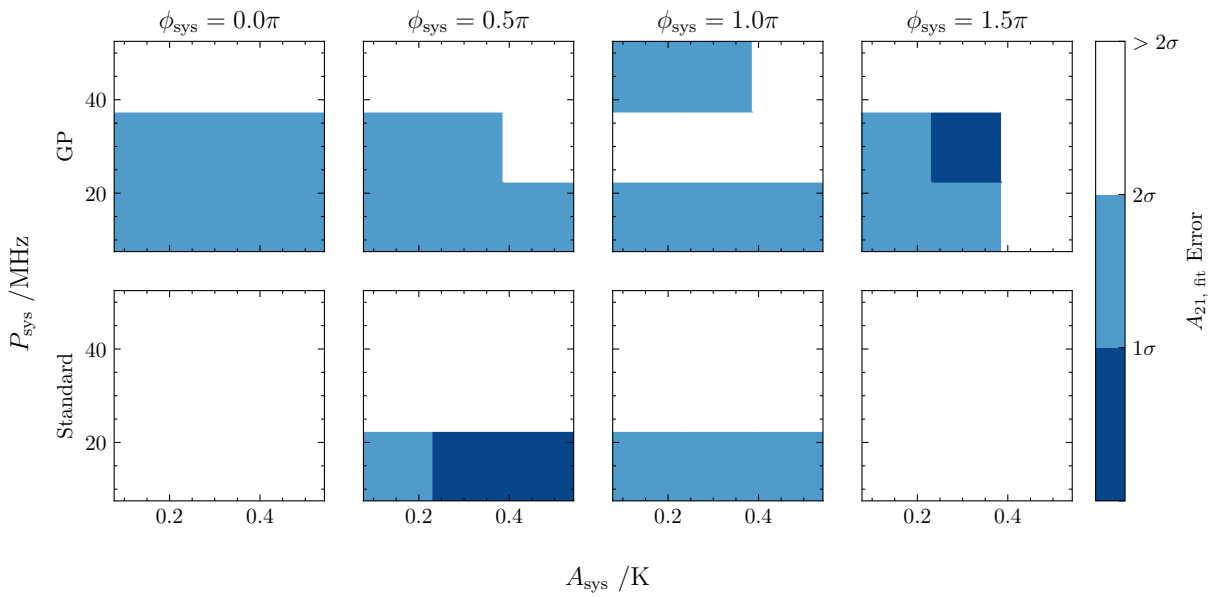

Figure 12. Distance from zero of the fitted value of the amplitude of the Gaussian signal model when there is no global signal in the data for the standard pipeline (lower row) and the Gaussian processes pipeline (upper row) for different systematic parameters.

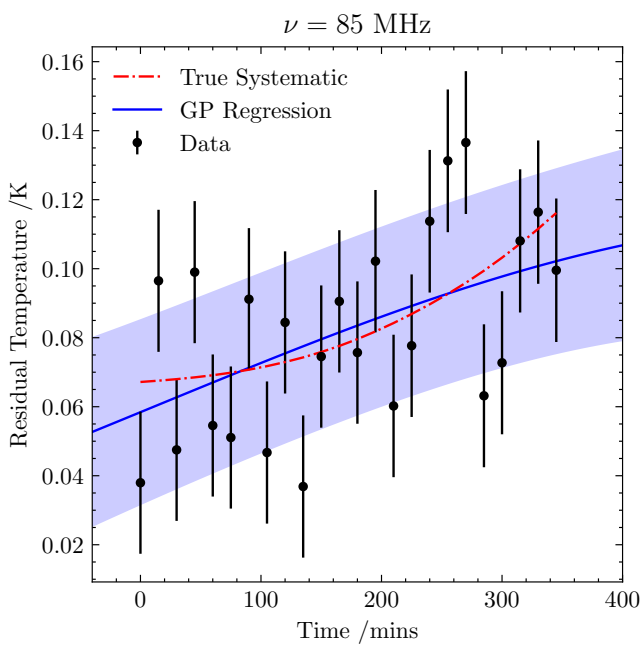

Figure 13. Example of Gaussian process time regression (equations 16 and 17) for the 85 MHz frequency bin for data with a systematic added. The blue line is the mean Gaussian process and the shaded area is the $\pm 1\sigma$ error. The red dot-dashed line is the true systematic amplitude over time. The initial amplitude of the systematic was set to $A_{\rm sys}$ = 0.209 K.
